

Sharmin Sirajudeen

Founder, Drengr · Staff Software Engineer

// profile

Software engineer with ~10 years building and leading mobile products used by millions across the Middle East, the UK, and India. Helped take two companies from small teams to regional scale — **Talabat** (joined a ~25-person tech team that grew into one of MENA's largest delivery platforms; 10M+ installs) and **Floward** (Android Staff Engineer; 1M+ installs; highest code contributor in their GitHub to date). Now founder of **Drengr**, pioneering a **framework-blind** approach to mobile product analytics and AI-driven app automation — a clean break from a decade of brittle, framework-coupled tooling. Deep across native Android (Kotlin / Java / Jetpack Compose), Flutter, and systems programming in Rust.

// experience

Founder — Drengr

2024 – Present

Dubai, UAE · drengr.dev

- Pioneering Drengr, a **framework-blind** mobile-analytics and AI-actuation platform — a clean break from a decade of brittle, framework-coupled tooling. A zero-code SDK + cloud platform that works from what's on screen, not a fragile UI tree, so it covers any app — native, Flutter, React Native, web-views, games.
- Attacking a large, growing market with a **zero-code, framework-blind SDK** and an open-core distribution model built for bottoms-up developer adoption.
- Sole founder across the full stack: product, engineering (Rust core; native Android / iOS / Flutter SDKs; ClickHouse analytics), go-to-market, and developer relations.
- Model: recurring software subscriptions and SDK licensing, sold to developers and technology companies worldwide.

Android Staff Engineer — Floward

Jul 2021 – Present

Dubai, UAE

- Staff Android engineer for Floward, a gifting platform across the Middle East and the UK (**customer app: 1M+ installs**), contributing across Android and Flutter.
- Own architecture, stability, and scalability of the Android codebase; maintain CI/CD, QA, and release pipelines; drive feature planning and cross-platform interoperability.
- **Highest code contributor** to the Floward customer-app codebase.

Senior Android Engineer — Talabat

Dec 2015 – Apr 2021

Dubai, UAE

- Joined when the tech team was ~25 people; grew with the company as it scaled into one of MENA's largest food-delivery platforms (**10M+ installs**; later part of Delivery Hero).
- Progressed mid-level → senior; built core UI and business logic; introduced in-app analytics and A/B testing.
- Helped lead the codebase migration to Kotlin and the team's adoption of Agile / Scrum.

// shipped

1

Talabat – 10M+ installs

2

Floward – 1M+ installs

Floward Rider
