

Sharmin Sirajudeen

Staff Software Engineer, Mobile (Android) · Platform & Architecture

// profile

Staff-level mobile engineer, ~10 years, who has twice taken a product from a small team to regional scale. Spent five and a half years at **Talabat** — joining at ~25 engineers and staying through its growth into one of MENA's largest food-delivery platforms (**10M+ installs**; later part of Delivery Hero). At **Floward** (**1M+ installs**), owned Android architecture, stability and the entire CI/CD, QA and release pipeline as **highest code contributor** to the customer app. Deep in native Android (Kotlin, Jetpack Compose, Coroutines), Flutter, and systems work in Rust; currently building **Dreng**, a zero-code mobile analytics SDK on a Rust core. Comfortable owning a mobile platform end to end — architecture, delivery pipeline, and the engineers.

// experience

Building Dreng

2026 – Present

Dubai, UAE · drengr.dev

- Building a **zero-code mobile & web analytics SDK** that captures real network traffic and behaviour, redacts PII on-device, and discovers and names business events automatically — no tracking plan required. One capture core across native, Flutter, React Native, web-views and games.
- Rust core** shipping as one self-contained binary, native Android / iOS / Flutter SDKs, **ClickHouse** analytics. Replaced WebDriverAgent with a host-less XCUITest runner embedded in the binary — headless, and identical on a laptop and in CI.

Staff Software Engineer - Android — Floward

Jul 2021 – Aug 2026

Dubai, UAE

- Owned the architecture** of the Android codebase for a gifting platform across the Middle East and the UK (**customer app: 1M+ installs**) — stability, scalability, and the technical direction of the app.
- Owned the delivery pipeline end to end:** CI/CD, QA and release process, plus cross-platform interoperability between Android and Flutter.
- Highest code contributor** to the customer-app codebase; drove feature planning with product and set engineering standards across the mobile team.

Senior Android Engineer — Talabat

Dec 2015 – Apr 2021

Dubai, UAE

- Joined when the tech team was ~25 people; grew with the company as it scaled into one of MENA's largest food-delivery platforms (**10M+ installs**; later part of Delivery Hero).
- Progressed mid-level → senior; built core UI and business logic; introduced in-app analytics and A/B testing.
- Helped lead the codebase migration to Kotlin and the team's adoption of Agile / Scrum.

// shipped

1

Talabat – 10M+ installs

2

Floward – 1M+ installs

iFood.jo

// the amber markers are how Drengr annotates a screen it's looking at

// how i work

I design the approach; **AI coding agents write most of the code**. On Dreng I worked out each step and Claude Code translated it beside me — I wrote almost none of the Rust by hand. Ten years of production judgement is what makes that safe: knowing what to reject is the job now, and it is how one engineer ships work that would conventionally need a team.

// skills

lang	Kotlin, Java, Dart, Rust, SQL
mobile	Android, Jetpack Compose, Coroutines, Flutter, Dagger 2, Room; MVVM / MVI / MVP
data	Rust services, ClickHouse, REST APIs, CI/CD
practice	Technical leadership, system architecture, Agile / Scrum, product development

// education

M.Tech, Computer Engineering
Sarabhai Inst. of Science & Technology – CUSAT, India · 2014
B.Tech, Computer Engineering
SHM Engineering College - University of Kerala, India · 2011

// personal

Nationality: Indian · Based in: Dubai, UAE · Languages: English (fluent) · DOB: 11 Nov 1989
